

## PREPARATION WITH HYPOLIPIDEMIC EFFECT «SIMVAGLYZINE»

### Description and properties

New preparation with hypolipidemic effect is a molecular complex of simvastatine and  $\beta$ -glycyrrhizic acid with molar ratio 1:(1-4).

The given complex is characterized by a reduced toxic effect due to a decreased doze of statine, with therapeutic properties being high.

### Advantages

Low-toxic medication; decrease of effective medical doze; simplicity of production; low price in comparison with the analogues (2-3 times lower).

### Application

Anti-hyperlipemia therapy

### Patents

Patent of the Russian Federation № 2308947 "Medication with hypolipidemic effect "Simvaglizine"

### Commercial offer

Licensing agreement

### Practical realization

Delivery of pilot batch and technical support in testing process. Cooperation in organization of industrial production.
